

Infrastructure

The IT infrastructure forms the foundation for the agility and productivity of any company. However, this significance also makes it the primary target of cyberattacks. Our goal is to design and protect your infrastructure according to international standards.

We are happy to support you with all topics related to architecture, engineering, compliance, provider, and process management:

- Do you need comprehensive analytical consulting regarding your infrastructures or support with design or migration scenarios?
- Are you facing the challenge of outsourcing services, or is the current implementation not meeting your expectations?
- Are the existing processes not adequately reflecting your requirements?
- Do you have concerns about the uninterrupted access, performance, and scalability of your infrastructures?

We deliver.

Infrastructure

Our focus areas:

- GAP analyses & redesign in system and network engineering, including ISMS (BSI/ISO IEC 27001), BSI Basic Protection, NIS-2, DORA, BAIT, VAIT
- GDPR compliance
- IT-Security/Cybersecurity (Firewall, SIEM)
- Vulnerability Management
- Cloud Computing/Integration
- Mobile Device Management

We deliver.

IT-Infrastructure Security

In an era of increasing cyber threats and digital attacks, it is essential for companies to protect their IT infrastructures with robust security measures. With the introduction of the NIS-2 Directive (Network and Information Security Directive) by the European Union, companies are being urged to secure their networks and information systems more effectively and to confront the challenges of cybersecurity.

In the area of NIS-2, we offer you the following consulting services:

- Consultation and Compliance Support: We help you understand and implement the requirements of NIS-2 to ensure that your company complies with legal regulations.
- Security Solutions: We provide advanced security solutions tailored to the specific needs of your business. From network security to incident response, we offer everything you need to defend against cyberattacks.
- Training and Awareness Programs: We offer training for your staff to raise awareness of cybersecurity and ensure that all employees understand best practices for handling sensitive data.

We deliver.
